"Ex-FABP: a fatty acid binding lipocalin developmentally regulated in chicken endochondral bone formation and myogenesis.";
Blochim. Blophys. Acta 1482:127-115(2000).

-I- FUNCTION: Preferentially binds long-chain unsaturated fatty acids such as linoleic acid, oleic acid, arachidonic acid. Also binds with a lower affinity long chain saturated fatty acids such as steraic acid. May act as survival protein by playing a role in maintaining cell viability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EXTRACELLULAR FATTY ACID BINDING PROTEIN.

J. Bacteriol. 179:7135-7155 (1997).

J. Bacteriol. 179:7135-7155 (1997).

J. Bacteriol. 179:7135-7155 (1997).

J. FUNCTION: IGPS catalyzes the conversion of PRFAR and glutamine ammonian necessary to IGP, AICAR and glutamate. The hisH subunit provides the glutamine aminoince and glutamate. The hisH subunit provides the glutamine conversion of IGP and AICAR (By similarity).

J. CATALYTIC ACTIVITY: 5-{{5-phospho-1-deoxyribulos-1-carboxamide + L-glutamine - imidazole-glycerol phosphate + 5-aminoimidazol-4-carboxamide ribonucleotide + L-glutamine - imidazole-glycerol phosphate + 1-subunit atterodimer of hish attellar step:

J. SUBUNIT: Heterodimer of hish and hish Responsible to the Sultamine amidotransferase domain.

J. SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                    16-OCT-2001 (Rel. 40, Last anomatical update)
28-FEB-2003 (Rel. 41, Last anomatical update)
Imidazole glycerol phosphate synthase subunit hish (EC 2.4.2.-) (IGP synthase glutramine amidotransferase subunit) (IGP synthase subunit hish) (IMGP synthase subunit hish)
                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           InterPro; _IPR000991; GATase_1.

The invention relates to 28193-11ke periods and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate 251G3 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The 251G33 peptides are used as antigens in the production of antibodies against 251G33 and in assays to identify modulators of 251G33 expression and activity. The anti-251G33 antibodies and antagonists are used to down regulate expression and activity. The anti-251G33 antibodies are also used as diagnostic agents for detecting the presence of 251G331 is amples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or hormones in the pancreas: zsig33-like pobtide. Is used in protein therapy. The present sequence is human zsig33-like peptide. zsig33-linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô

ZSIG33-Like peptides and polynucleotides, useful for modulating gastric

```
The invention relates to zaig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones.

The sequences of the invention and their complements are used as mucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The 251G33 perfects may be in need of restorative therapy. The 251G33 and in assays to identify modulators of 251G33 expression and activity. The anti-251G33 antibodies are used to down regulate expression and activity. The anti-251G33 antibodies are also used as diagnostic agents for detecting the presence of 251G33 in samples (e.g. by enzyme linked immunosorbent assays (ELISA). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zaig33-like peptide, zaig33-linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nutrient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; zsig33-like peptide; ZS33LP; immunity; developmental process; infection; human immunodeficiency virus; vaccine; antihypoglycaemic; adsorption enhancer; gastrointestinal disease; growth related disease; inflammation; gene therapy; growth regulation; blood vessel formation; HIV; zsig33-linker peptide.

hypoglycaemic preparations containing glucose and as adsorption enhancers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation, growth factor and hormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These conjectures are useful for treating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth related diseases. E331L peptides, nucleic cids and/or antibodies are useful for treating disorders associated with gastrointestinal contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones in the pancreas and/or brain, gastrointestinal motility, recruitment of digestive enzymes, inflammation and requiation of nutrient absorption. Sequences of the invention are and acids, association of some contractions of the invention are and requiration of nutrient absorption. Sequences of the invention are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to zsig33-like peptides (zsi31p) including zsig33-epsilon peptides and nucleic acid molecules encoding such zsig33-epsilon peptides and nucleic acid molecules encoding such zsig33-like peptides. Zsi31p peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and fisolate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pitultary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; zsig33-like peptide; gastric contractility; nutrient uptake; growth hormone; digestive enzyme; restorative therapy; gene therapy; protein therapy; gastrointestinal; endocrine; anabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in gene therapy. The present sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                      uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises 2s1g33-like peptides -

                                                                                                                                               The Inventoring tradecs to Extract preprints (assure) and the inventoring tradecs and nucleic acid molecules encoding such assign3-tike peptides and nucleic acid molecules encoding such assign3-tike peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in the boosting immunity to infectious diseases, treating immunocompromised contains such as human immunodeficiency virus (HIV) patients, in the infections. Peptides of the invention are used to identify and isolate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for vessel formation and other developmental processes. They are useful for thypoglycaemic preparations containing glucose and as adsorption by programment of proper require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as the expansion, differentiation, growth factor and with agartointestinal system, brain and centrain nervous system. These molecules are useful for treating dysfunction associated with contractile contractility in vivo and to treat contractility in vivo and pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to zsig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention and their complements are used as treatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG31 in samples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide. zsig33-like peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                      ZSIG33-Like peptides and polynucleotides, useful for modulating gastric
contractility, nutrient uptake, growth hormones and/or secretion of
digestive/pancreatic enzymes and hormones -

The invention relates to zsig33-like peptides (zs31LP) including zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and casig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and casig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and casig33-linker peptides and nucleic acid molecules encoding such casig33-like peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised in particular such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and cingal infections. Peptides of the invention are used to identify and cingal infections of peptides of the invention are used to identify and cossel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate companies for oral drugs which require fast nutrient action and to hypoglycaemic preparations containing glucose and as adsorption channers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation, growth factor and charmone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These concentrality in vivo and to treat gastrointestinal and growth related diseases. Z331Lp peptides, nucleic contraction of diseative and and/or calial contraction of interaction of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hormone and acids, secretion of hormones in the pancreas and/or brain, pastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises zslg33-like peptides -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides ovectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides caused by a deficiency in growth hormone appression or activity. In particular, they are useful for promoting infant growth due to growth the normone deficiency. The compounds of the invention are useful for promoting infant growth due to growth on accompanying side effects. The present sequence represents a partiturin-type growth hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Zsig33; gastric motility; gastrointestinal inflammation; reflux disease;
nutrient absorption regulation; obesity; metabolic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for identifying a cancer cell or tissue of the reproductive system by detecting expression of a ghrelin, an exon-3 deleted preprogheslin and/or a GHS-R Ib protechis or nucleic acids. The antibodies, exon 3-deleted form of preprogheslin and antagonists are useful for treating cancer of the reproductive system such as prostate, ovarian, breast, cervical or uterine cancer, choricorarchinoma or benign prostatic hyperplasia. The present sequence is human exon 3-deleted ghrelin protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               breast cancer, or benign prostatic hyperplasia, by detecting the expression of a ghrelin, an exon-3 deleted preproghrelin and/or a GHS-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               á
                                                                                                                                                                                                                                                                                     cids are strongly expressed in stomach lissue. The polypeptide (or allelic variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal call contractility, secretion of digestive enzymes/acids, gastrointestinal motility, recruitment of digestive carymes/acids, gastrointestinal inflammation, reflux disease and nutrient beborption regulation. Zsig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety or treat obesity and other metabolic disorders where neurological feedback modulates nutritional absorption. They are useful to identify a signal systems and ligands and to produce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô

human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, noctropic, hepatotropic, neuroprotective, cardivascular and antimisthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of associated with increased activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, creproductive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psortasis, acquired immune deficiency syndrome, anaemia, asthma, Crohn's disease, microbial or other infections, congestive or ischemic heart disease, Alzheimer's, Parkinson's or Huntington's clischemic heart disease, Alzheimer's, Parkinson's or Huntington's clischemic heart disease, microbial or other infections, congestive or ischemic acids can be used for the recombinant production of HSPP, for disease, microbial and mplification assays (for detecting HSPP in standard hybridisation and amplification assays (for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosis and monitoring), in gene therapy, as antisense, triplex-forming or ribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antagonists (potential therapeutic agents). Ab are used to diagnose, or monitor, HSPP-related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP from natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic;

The invention relates to a method of forming a reversible peptide-
receptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsigi3 peptide (comprising residues 24-37
of AA862649), where the receptor binds to the zsigi3 peptide. The method
is useful for purifying calls, purifying a peptide, stimulating signal
transduction in a call expressing a receptor. It is also useful for modulating secretion of hormones, neural development and/or utilization,
gastric contractility, nutrient uptake, secretion of digestive and
modulating secretion in a mammal having a disease associated with abnormal
it secretion of non-zsigi3 proteins. It is useful for modulating growth
hormone secretion in a mammal having a disease associated with abnormal
levels of growth hormone, such as osteoporosis, bone remodeling,
skeletal dysplasia, immune suppression, obesity, growth retardation,
skeletal dysplasia, immune suppression, obesity, growth retardation,
cremodeling a mammal having a disease subscience and mammal having
a metabolic disorder requiring neurological feedback, such as satiety
a metabolic disorder requiring neurological feedback, such as satiety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      regulation, glucose absorption and metabolism and neuropathy associated gastrointestinal disorders, and stimulating glucose-induced insulin release in a mammal. The present sequence represents the human zsig33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    colypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human nucleic.acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous asystem, such as peripheral nervous system diseases, such as alzahamer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed

Peptide Protein Peptide 30-JUN-1999;

04-JAN-2001

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promothing infant growth due to growth hormone deficiency. The compounds of the invention are safe with a concompanying side effects. The present sequence represents a ghrein in type growth hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                 Growth hormone secretagogue, GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 117;
                                                                                                                                                                                                                                                                                                                                                                                                                    Matsuo H, Minamitake Y;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see secretagoque receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jejunum tissue. Stimulating contractability in duodenum or jejunum tissue, modulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying.
                                                                                SGIP; zsig33; anorectic; antidiabetic; somatotropin; somatomedin-C; nutritional absorption modulator; growth hormone secretagogue; therapy; human.

The present sequence represents human zsig33. The specification describes a short gastrointestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with languages and treatment of diseases associated with the deressed expression by rectifying mutations of deletions in a patient's genome that affect the actifying mutations of SGIP SGIP may also be used as an antigon in the production of antibodies against SGIP and in assays to identify modulators of SGIP expression and activity. The anti-SGIP antibodies, agonists and antibodies may also be used to regulate expression and activity. The anti-SGIP antibodies, agonists and antibodies may also be used as a diagnostic agents for detecting the presence of SGIP in samples.
                                                                                                                                                                                                                                                                                                                                                                  New Short Gastrointestinal Peptide, which has homology to motilin, useful for preventing, diagnosing and treating gastrointestinal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
